CAREER OBJECTIVES

Frontend Developer and BSc Computer Science student with hands-on internship experience delivering client-facing websites for USA and Dubai-based businesses. Built production-grade with wordpress JavaScript applications, shipped a live App Store product, and executed end-to-end freelance projects demonstrating practical software delivery across real commercial and academic contexts.

EDUCATION

2023 - 2026

Rd national college of
arts and sciences college

BSC.COMPUTER SCIENCE

CGPA: 6.5(till 5th semester)

2019 - 2023

Vetri Vikaas Higher
Secondary School

Higher Secondary Certificate (HSC)

Percentage: 50% | Year: 2023

Secondary School Leaving Certificate (SSLC)

Percentage: ALL PASS | Year: 2021

AREA OF INTEREST

- Full stack development
- web design

TECHNICAL SKILLS

- Languages: HTML5, CSS3, JavaScript (ES6+), Python
- Frontend: React.js, Tailwind CSS, Responsive Web Design, DOM Manipulation, REST API Integration
- Tools & Platforms: Git, GitHub, App Store Deployment, Web Design Tools(wordpress)
- Libraries/Frameworks: scikit-learn (ML), OpenCV (Facial Recognition)

PROJECTS

1. Personal Expense Tracker

Tech Stack : React.js · Tailwind CSS

Description:

- A responsive budget tracking app where users log daily expenses by category, with real-time totals rendered via React state — eliminating manual spend logging.

2. Live Weather Checker

Tech Stack : HTML · CSS · JavaScript · REST API

Description:

- A city-based weather app that fetches real-time temperature, humidity, and conditions from OpenWeatherMap API and renders them instantly on a mobile-first UI.

3. Online Exam Conducting Platform

Tech Stack:HTML · CSS · JavaScript

Description:

- A browser-based exam system with a timed quiz engine and auto-scoring — replacing paper-based assessments and eliminating manual grading delays.

4. Import/Export Company Website

Tech Stack : HTML · CSS · JavaScript | Freelance

Description :

- A production client website with product catalogues, contact forms, and business credentials — giving an import/export business its first professional digital presence.

5. The Fly Path — Offline Plane Tracker

Tech Stack:iOS · App Store | Solo Developer

Description:

- A published iOS app for offline flight path tracking — pre-caching route data locally so core functionality works without any internet connection.
